Professional Summary

Final-year Computer Science and Engineering student at United International University, focused on frontend web development and software engineering. Skilled in HTML, CSS, JavaScript, React, Git, and GitHub, with academic project experience in web development, database systems, backend API support, and AI/ML-based projects. A fast learner with strong adaptability, able to quickly learn new technologies and contribute in real development environments. Actively seeking a Frontend Developer Internship or Web Developer Internship.

Technical Skills

Core Frontend Skills

- HTML, CSS, JavaScript
- React
- Responsive Web Design
- Basic UI/UX Understanding

Development Tools

- Git, GitHub
- VS Code
- Browser Developer Tools

Backend & Database Familiarity

- Node.js, Express.js
- REST API
- SQL, MySQL, SQLite

Basic Programming Familiarity

- Python, C, C++, Java, PHP

Academic Exposure

- Machine Learning Basics
- Database Management
- Software Engineering
- Cybersecurity Basics

Concepts

- Software Engineering
- API Integration
- Database Management
- Machine Learning Basics
- Cybersecurity Basics

Education

B.Sc. in Computer Science & Engineering

United International University
Dhaka, Bangladesh
Status: Ongoing / Final Year

Relevant Coursework

- Software Engineering
- Database Management System
- Artificial Intelligence
- Data Structures and Algorithms
- Object-Oriented Programming

Projects

Orpon – Donation Transparency Platform

Software Engineering Lab Project — Team Contributor
github.com/shezanyo/Orpon

- Contributed to a cryptographically verifiable crowdfunding and donation transparency platform.
- Worked mainly on backend development, API implementation, and database support.
- Supported server-side functionality, project documentation, and team collaboration using GitHub.
- Collaborated with team members on a full-stack software engineering project.

Tech: Node.js, Express.js, SQL, REST API, Git, GitHub

Crime Alert – Area-Based Crime Reporting System

Database Management System Academic Project

- Developed a database-driven security alert system where verified users can select areas, view crime reports, and submit new crime updates.
- Implemented area-based crime reporting, automatic database updates, user notifications, SOS emergency support, and emergency contact information.
- Used Google API for map-based location features to display crime-prone areas and nearby emergency services.

Tech: SQL, Database Design, Google API, CRUD Operations, Notification System

Smart Attendance System Using Face Recognition and QR Code

Artificial Intelligence Laboratory Project

- Developed an AI-based attendance system using face recognition and QR code verification to reduce manual attendance errors and proxy attendance.
- Used computer vision techniques to detect and recognize registered students from facial images and mark attendance automatically.
- Implemented QR code verification as an additional security layer for student identity confirmation.
- Designed the system workflow with registration, recognition, verification, and attendance record management.

Tech: Python, Flask, OpenCV, Face Recognition, QR Code, Machine Learning

- Computer Networks
- Computer Security
- Machine Learning Basics

Work Experience

IT Executive – ACS Express

International Courier Company

- Managed IT system operations, troubleshooting, and technical support tasks.
- Supported hardware and software-related issues in an operational environment.
- Communicated with customers and international partners to support service operations.
- Improved customer support efficiency through technical problem-solving and coordination.

Soft Skills

- Problem-solving
- Team collaboration
- Communication
- Documentation
- Adaptability
- Customer support handling

Languages

Bangla – Native

English – Professional Working Proficiency

Career Objective

To build a career as a frontend/web developer by applying technical knowledge, software engineering practice, and problem-solving skills in real development environments. Interested in contributing to user-friendly web applications while continuously improving frontend, backend, and software development skills.

Student Performance Prediction and Clustering Using Machine Learning

Artificial Intelligence Laboratory Project

- Developed a machine learning-based system to predict student academic performance and identify performance-based student groups.
- Applied K-Nearest Neighbor and Logistic Regression for pass/fail prediction using academic and behavioral features.
- Used K-Means clustering to group students based on similar performance patterns.
- Performed dataset preprocessing, feature selection, visualization, model training, and evaluation.

Tech: Python, KNN, Logistic Regression, K-Means Clustering, Matplotlib, Machine Learning

Agricultural Soil Nutrient Analysis and Crop Suitability Prediction

Final Year Design Project / Research Project

- Conducted research on soil nutrient analysis, soil classification, and crop suitability prediction using machine learning.
- Studied agricultural features such as N, P, K, pH, moisture, organic carbon, and related soil attributes.
- Worked on dataset study, preprocessing, exploratory analysis, model comparison, and evaluation.

Tech: Python, Pandas, NumPy, Scikit-learn, Machine Learning

Network Intrusion Detection Using Machine Learning

Computer Security Research Project

- Studied machine learning-based approaches for network intrusion detection.
- Worked with cybersecurity concepts, classification models, and intrusion detection system methodology.
- Analyzed models such as Random Forest, Naive Bayes, KNN, SVM, and Extra Trees.

Tech: Python, Machine Learning, Cybersecurity, Data Analysis
